Reference Balanced Link

Reference Speaker Link

Pushing the boundaries of science in sound reproduction has and always will be CH Precision's first and foremost objective. It is with this ambition in mind that we have developed the Reference series of cables in close partnership with the widely acclaimed cable manufacturer, Argento Audio.

This line of cables comprises the Reference Balanced Link and the Reference Speaker Link. Both types of connector contacts are made in the material with the best conductivity on planet Earth, the noble silver element. Speaker wire strands are also made of solid silver, no compromise has been made anywhere.

Reference Balanced Link

The fine tuned combination of conductive strands interlaced with damping cotton fibers, unique cable twisting and a no shield design provides the Reference Balanced Link with the extremely low capacitance necessary for outstandingly high bandwidth interconnection.
Besides, with pure silver pins, Teflon for non-conductive parts, all of which cast inside a non-magnetic metallic body, the Reference Balanced Link cable allows the finest details of the audio material to be truthfully and accurately conveyed. The CH Precision Reference Balanced Link cable is designed to interconnect analog audio pieces of equipment, using balanced signaling through custom-made XLR connectors and is available in lengths from 0.5 meter, in 0.5 meter steps.

Reference Speaker Link

Both the electrical aspects (cable twisting as well as the number, shape and size of silver conductors) and the mechanical aspects (interlaced cotton fibers in between the silver strands for damping purposes) have been thoroughly analyzed to provide the best possible coupling between amplifiers and loudspeakers.

The astonishing low capacitance efficiently prevents any energy from being stored in the cable and injected back in the system. The leads to unprecedented clarity, not only heard in the bandwidth extension in the treble, but also in the solid bass foundation this cable provides. The Reference Speaker Link is available in lengths from 1 meter, in 0.5 meter steps.
